

Incense Cedar

Pecky Landscape Timbers

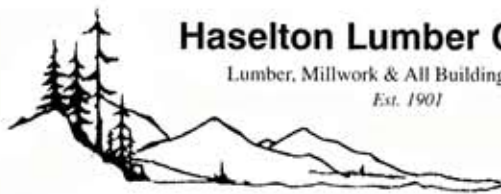

ALL NATURAL BEAUTY, ALL ORGANIC

Made from Incense Cedar, pecky wood contains pockets or areas of disintegrated wood caused by advanced stages of localized fungus in the living tree. When the tree is cut down, this process stops, so there is no further decay. This makes it a great way to add visual interest without sacrificing longevity.

Thanks to its natural oils, Incense Cedar is resistant to decay. Unlike other woods that need to be injected with oils or chemicals, C&D Lumber's landscape timbers are 100% organic, all natural and safe. They're a great choice for those with pets and children, and are a long-lasting, safe choice for raised garden and vegetable beds. Greenhouse benches, flower boxes, boardwalks and other high humidity and moisture locations are also well suited for these timbers.

- Naturally safe—no chemicals
- Environmentally benign
- Safe for children and pets
- Perfect for raised beds
- Decay resistant
- Affordable
- 6' to 12' lengths for easy handling
- 14' and longer available
